

STEREISOMERISM

CONFIGURATIONAL ISOMERISM

CONFORMATIONAL ISOMERISM

OPTICAL ISOMERISM [(+)/d dextrorotatory (-)/l levorotatory]

CONFORMER

DIASTEREOMER

ENANTIOMER

....

ROTAMER

ATROPISOMER

ring conformations:

GEOMETRIC ISOMERISM

EPIMER

ABSOLUTE stereochemistry E/Z-ISOMER

RELATIVE stereochemistry cis/trans-ISOMER

ANOMER

glycosides, hemiacetals, sugars

Q. Which of the following does not show geometrical isomerism?
(1) 1, 2-dichloro-1-pentene
(2) 1, 3-dichloro-2-pentene
(3) 1, 1-dichloro-1-pentene
(4) 1, 4-dichloro-2-pentene

Q. Out of the following, the alkene that exhibits optical isomerism is:
(1) 2-methyl-2-pentene
(2) 3-methyl-2-pentene
(3) 4-methyl-1-pentene
(4) 3-methyl-1-pentene

Q. With respect to the conformers of ethane, which of the following statements is true? [NEET-2017]
(1) Both bond angles and bond length remains same
(2) Bond angle remains same but bond length changes
(3) Bond angle changes but bond length remains
(4) Both bond angle and bond length change
